DE TOEKOMST MET HET GLAS

WALL PANELLING IN LACOBEL BROWN STARLIGHT

The painted glass in the Lacobel and Matelac 20/20 product range lends your walls and furniture a long-lasting and vibrant finish in a wide range of contemporary colours.

CONNECTIONS THROUGH VARIATIONS IN COLOUR

The design options are virtually unlimited, as with their 20 identical shades in common, Lacobel and Matelac glazing can be subtly combined with a wide variety of materials such as wood, stone and metal to create a stylish ambience.

There are three colour collections to choose from: Classics, Trendies and Exclusives. With this colour range, an almost infinite variety of looks can be created – harmonious to rich in contrast.

And if your project requires a unique colour shade, the MyColour service will create one specifically for your requirements on request.

WALL PANELLING IN MATELAC GREEN SAGE

Walls, sliding doors and furniture retain their original appearance for years, because the production process used guarantees uniformly applied glossy (Lacobel) or matt (Matelac) paint that adheres flawlessly to the glass.

CHOOSE SOMETHING SPECIAL

Only environmentally friendly paints are used for Lacobel and Matelac. Extremely low emissions of volatile organic compounds and formaldehyde mean that indoor air quality is maintained.

Thanks to 20 on-trend colours and the MyColour service, design options in gloss or matt are virtually unlimited.

Easy to install as Lacobel and Matelac (for furniture and wall panelling) are fitted just like mirrors. You can find installation instructions at www.yourglass.com.

For additional safety, Lacobel and Matelac are also available with SAFE(+) film on request.

A polypropylene film on the painted glass side provides even more protection for your Lacobel or Matelac product.

WALL PANNELLING IN LACOBEL COPPER METAL

The Classics

The Classics range features three timeless colours per product line. White Soft and Black Classic can be combined with all other colours. As the Lacobel version, they lend an interior a sophisticated sheen and reveal new aspects. As the Matelac version, the satin finish creates a cosy, intimate atmosphere. Lacobel Red Luminous adds vibrancy to an interior, while Matelac Silver Clear adds a subtle sophisticated feel.

LACOBEL & MATELAC

The Trendies

The nature inspired contemporary colours of the Trendies series create warm textures and a soothing ambience. From the immaculate White

Pure to the earthiness of Brown Natural, the palette includes other colours inspired by nature such as Red Terracotta, Green Soft and Green Sage. The almost identical colours in both ranges (with the exception of Beige Light/Warm) allow playful combinations of similar tones, creating a contemporary, colourful, high-end design for your interiors.

The Exclusives

The Exclusives range is designed to create interiors with a unique, sophisticated elegance. The colour palette includes three exclusive shades: silver*, metallic and glossy. Pair with luxury materials such as wood, marble or copper to create a wonderfully stylish environment.

* Matelac silver products are made of non-silver-coated, acid-matted mirror glass.

A VARIETY OF COLOURS WITH MYCOLOUR

Even if the colour you are looking for is not in the existing palette, we have the solution. The MyColour by Lacobel and Matelac Service allows you to order any colour* of painted glass without compromising on the quality standards of Lacobel or Matelac.

MYCOLOUR BY LACOBEL

The “colour-on-demand” option is available for orders starting from 200 m² per colour. This allows wall coverings and furniture to be perfectly coordinated with a custom design or a unique colour scheme.

Special versions:

The SAFE and SAFE+ variants offer your glass enhanced protection. In the event of glass breakage, the shards adhere to the film, in turn preventing injuries. In addition, the film protects the painted side of the glass from scratches.

When antibacterial glass is used, 99.9% of the bacteria that settle on the glass surface are eradicated and fungi are prevented from spreading. That makes this glass particularly suitable for tighter hygiene requirements.

** This option is not available for transparent and metallic colours.*

MATELAC COLOUR RANGE

Other features

Processing/properties			Comments
Installation	Orientation and protection of the metallic and Starlight paint layers	-	Due to the special colour pigments of the metallic and Starlight paints, these coatings have a specific orientation. This must be taken into account during planning, processing and installation. The other colours in the range are applied isotropically (i.e. the paint layer has no "direction" or "orientation"). If silicone is used when mounting the glass, additional protection of the back-painted glass is required for the metallic and Starlight colours. These colours may only be used for Safe or Safe+ versions – see processing guidelines.
Watertight		Yes	All Lacobel/Matelac paints are water and moisture resistant. Seal Lacobel/Matelac on the rear of the glass to prevent water ingress (use silicone for the joints).
Mechanical strength		Yes	Similar to float glass Do not damage the paintwork during processing and installation – see processing guidelines.
